ETHASFISH FARMS

Portal User Manual

Staff guide to the POS, Orders, Credit ledger, Stock and CMS tools

Version 2.0 · October 2026

What's inside

1. Getting Started 2. Dashboard 3. Point of Sale 4. Orders
5. Credit Ledger 6. Fish Stock 7. Products, Media & Site Content
8. Invoices & Accounting 9. Receipts 10. AI Assistant & Agents 11. Quick Glossary

This PDF lives in the portal sidebar - look for "Portal Manual" to download the latest copy at any time.

1. Getting Started

Sign in at /sign-in with your staff account. Admins see every section in this manual; sales managers get the day-to-day till tools - Dashboard, Assistant, Point of Sale, Orders, Credit, Leads, Products, Promotions and Stock.

- Desktop shows a sidebar on the left; on phones and tablets tap the menu icon at the top to open the same navigation.
- Use the sun/moon button to switch light/dark theme - your choice is remembered.
- Sign out from the icon at the bottom of the sidebar (or the one inside the mobile menu).
- Accounting, Purchasing, Invoices, Site Content, Media, Bot FAQs, Activity Log, Staff and Settings are admin-only sections.

2. Dashboard (/admin)

- Four cards - Total orders, Pending, This month (revenue from paid orders only) and Active products.
- Recent Orders shows the last 8 orders with their status and payment colour; "View all" jumps to Orders.

3. Point of Sale (/admin/pos)

- Search or tap a product variant to add it to the cart; + / - adjusts quantity and can never exceed the live stock figure.
- Press Charge and pick how the customer pays: Cash (quick notes, change due), M-Pesa (enter the reference from the customer's confirmation SMS), or Credit.
- Credit: customer name, phone and a payment due date are required. The sale is saved unpaid and the printed receipt says PAY LATER with the due date.
- The till shares stock with the online shop - every POS sale reduces website stock instantly, and the website does the same for the till.
- Print the receipt from the confirmation popup, or install the POS as its own app with the "Install App" button.

4. Orders (/admin/orders)

- Filter by fulfilment status (pending, paid, preparing, out_for_delivery, delivered, cancelled) or by payment: All / Owed / Credit / Paid.
- POS sales carry a POS badge, credit sales show a CREDIT badge, and anything unpaid past its due date gets a red OVERDUE outline with the number of days late.
- Record Payment accepts any amount up to the outstanding balance (cash, mpesa, bank or mobile) with an optional reference. Part-payments are allowed - the balance stays owed until it is settled in full.
- Resend Receipt pushes the receipt again through WhatsApp / SMS / email when those channels are configured; View Receipt opens the printable copy.

5. Credit Ledger (/admin/credit)

- Three totals across the top - total owed, how much of it is overdue, and how many customers owe anything.
- Tap a customer row to expand their open orders with due dates; Record Payment settles an order without leaving the page.
- The ledger fills itself from POS credit sales and unpaid orders - every payment recorded here also appears on the order in Orders.

6. Fish Stock (/admin/stock)

- Record harvests from numbered cages, ponds or the hatchery (pieces + kilograms) - this builds up farm stock.
- Distribute farm stock to outlets, then record outlet sales in pieces and/or kilograms. Balances are always derived: farm = harvests - distributions; outlet = distributions - sales.
- Low-stock alerts fire when an outlet drops to its per-outlet piece/kg thresholds (set them on the outlet; 0 turns an alert off).
- The Stockist Agent (chat on the Stock tab) answers stock questions and can record harvests, distributions and sales for you.

7. Products, Media & Site Content

- /admin/products - products and their variants (label, pieces, weight, price, stock). A price of 0 means quote-only: it is hidden from the till.
- /admin/media - drag & drop images and videos; reuse them anywhere with Upload / Library in the media picker.
- /admin/content - edit the homepage, hero slides, stats and the farm gallery. Saves go live immediately - no redeploy needed.
- Product stock and fish stock are separate on purpose: packed variants track shop stock, while the fish ledger tracks pieces/kg at the farm and outlets.

8. Invoices & Accounting (admin)

- /admin/invoices - raise an invoice with an optional due date; move it draft -> sent -> paid, or overdue / void; print from the invoice page.
- /admin/expenses - log expenses; the accounting summary counts paid orders only.
- /admin/settings - VAT rate and KRA PIN (0% while not VAT-registered; prices are treated as VAT-inclusive either way).
- /admin/purchasing - supplier purchase orders. /admin/staff - who can sign in. /admin/activity - every action, with who did it.

9. Receipts & Notifications

- Receipts go out via WhatsApp, SMS (Africa's Talking) and email (Resend) - each channel is skipped quietly when its API key is not set.
- Every receipt includes the order number and a track link (/track) the customer can open any time to check status.

10. AI Assistant & Agents

- /admin/assistant answers read-only questions about the business; the Stockist Agent on the Stock tab can also write stock movements through validated tools.
- /admin/agents (admin) lists every run - model, tokens used and which tools were called.
- Premium models need Vercel AI Gateway credits; without them the agents fall back to a free-tier model (or the rule-based storefront bot).

11. Quick Glossary

- Order status - pending, paid, preparing, out_for_delivery, delivered, cancelled: where the goods are.
- Payment status - unpaid, processing, partially_paid, paid, failed: where the money is. Revenue figures count paid orders only.

- Channel - online (website checkout) or pos (till). Method - mpesa, cash or credit.
- Credit terms - due date set at the sale; the order turns overdue once that date passes while still unpaid.
